

CAPABILITY STATEMENT

BlueCredit

Core Competencies

- Hydrological Modeling & Water Resources Engineering for integrated surface water, groundwater, and stormwater systems, enabling basin-scale analysis, flood studies, hydraulic modeling, bridge and culvert hydraulics, and water resources planning.
- Water Sustainability & Compliance including water stewardship, water risk assessments, ESG reporting, disclosure, regulatory compliance, stormwater permitting, MS4 support, NPDES permitting, and SWPPP development.
- Stormwater, Drainage & Flood Risk Management including hydrologic and hydraulic analysis, drainage design, green infrastructure, erosion and sediment control, floodplain analysis, flood risk mapping, and climate resilience planning.
- Infrastructure Inspection & Asset Management including condition assessments of water, stormwater infrastructure, GIS-based asset inventories, and capital improvement planning.
- Data, Analytics & Reporting including GIS dashboards, digital twins, remote sensing, and environmental credit tracking and reporting

Differentiators

Our Differentiators:

- DMV-based firm with deep expertise in water resources and environmental compliance. Ability to deploy internationally (Africa, LATAM, APAC).
- Cost-efficient, integrated delivery model combining advisory, engineering, field execution, and GIS/analytics-driven decision support with strong repeat-client performance
- Digital water expertise in developing online water applications for water utilities and watershed management.

Past Performance

- PRIME/ LEAD – BlueCredit. Developed the BlueCredit platform, including architecture & GIS integration. Built water accounting and crediting methodologies, incorporating watershed and infrastructure data for credit generation, tracking, and ESG reporting.
- SUBCONTRACTOR – Clark Nexsen | Virginia DOT/DI/Q. Executed multiple stormwater projects across DMV Counties for roadway improvements, pedestrian trails, intersection upgrades and bridge hydraulics. Awarded 2024 (\$50,000).
- SUBCONTRACTOR – Kleinfelder | Bald Eagle Village South Field Groundwater Modeling and NJPDES Support (NJ) for Suez Water. Performed 3D groundwater flow and contaminant transport modeling using MODFLOW to evaluate the impact of a Large Subsurface Sewage Disposal System. Awarded 2021 (\$20,000)
- SUBCONTRACTOR – The Balmoral Group | FDOT Task Orders. Water engineering support for FDOT and CFX projects across Florida incl. stormwater modeling, drainage design, pond siting, and floodplain/bridge hydraulics analysis (\$100,000).
- SUBCONTRACTOR – The Balmoral Group | ESG assessment for Australian Grain Research Development Corporation and a phased roadmap for sustainability in grains supply chains (\$22,000).

Company Data

Background

BlueCredit Water Consulting provides water resources engineering, stormwater, sustainability, and digital water services. Our team combines technical expertise in hydrology, hydraulics, infrastructure, GIS, and environmental compliance to deliver practical solutions that enhance operational performance, support regulatory requirements, manage water-related risks, and build long-term resilience.

Contracting Readiness

- Registered in SAM.gov
- Available for prime and subcontracting opportunities
- Ability to support federal and local water projects through technical advisory and engineering services
- Capable of performing under federal, state, municipal, and private-sector procurement frameworks
